Delivered documentation

The documentation delivered with the SignOnLibrary contains the following documents.

Document	Description
Using the SignOn library	Describes how to use the SignOnLibrary as a vendor developer. Example code in C#, Visual C (COM) and Java is available in this document.
Deployment Notes	Describes how to deploy the library together with the vendor application, special notes for COM and Java deployment included in this document.
Platform Tests	Short document that describes the platforms that the library has been tested on (and what the test covers)
CAPI PKI Plugin Guide	Documentation for the CAPI PKI Plugin, including sample code in C# and a description of how to handle the various error situations.
Plugin Development for the SignOn Library	Document that describes how to develop plugins for the SignOn Library.
GWPlugin Guide	Documentation for the GW Plugin, including sample code in C#.
Verifying the integrity of the SignOn Library	Documents the signature scheme used to protect the integrity of the SignOn Library, as well as code samples for validating the signature in various languages.
Library/Plugin Signing Setup	Document describing the proposed setup for signing the SignOn Library DLL and the plugin DLLs
Cryptomathic Signer PKI Plugin Guide	Documentation for the Cryptomathic Signer PKI Plugin.
Build Notes	A document that covers all the relevant information for building the SignOn Library and the various wrappers, as well as what to sign.

More information

The SignOn Library project, as governed by SDSD has a wiki available, containing more documentation on the SignOn architecture itself. This wiki can be found at the following address

<http://arkitektur.sdsd.dk/twiki/bin/view/SignOn/WebHome>
